International laboratory “Computer technologies”

International laboratory “Computer technologies” conducts researches in the following fields:

- **Programming technologies.** Development of search-based software engineering methods on the basis of the automata-based approach for automated design, development, testing and verification of software, including software for critical systems.

- **Machine learning.** Development of algorithms for increasing efficiency of discrete optimization using machine learning, runtime analysis of these algorithms. Development of classification and clustering methods based on machine learning.

- **Bioinformatics.** Development of algorithms for genome assembly and methods for analysis of biological data.

---

**Heads of the laboratory**

**Anatoly Shalyto**
Professor, D. Sc. Tech.
ITMO University

**Valeriy Vyatkin**
Professor, D. Sc. Tech.
Lulea University of Technology (Sweden), Aalto University (Finland)

**Maxim Artyomov**
PhD
Washington University in St. Louis (USA)

---

**Contacts**

197101, Russia, St. Petersburg, Kronverksky pr. 49
